

1.

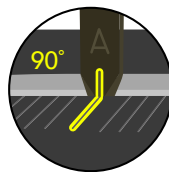

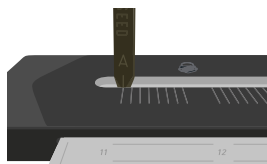

Insert Plate

Slide the seed plate into the stamping guide so the desired row is centered in the window.

**For 12-word plates, insert the adapter first.*

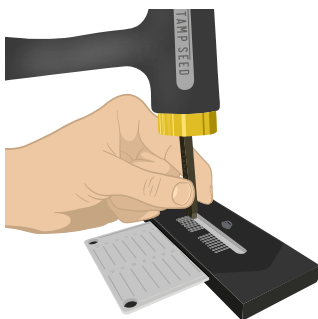

2.

Align Stamp

Position the stamp so its center mark aligns with the guide's indicator. Hold it at a 90° angle to the plate.

3.

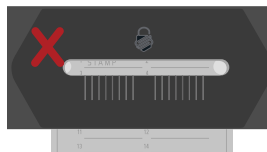

Stamp the Plate

Hold the stamp firmly at its base, keeping it flat against the plate.

Strike it once with force.

Only strike again if more force is needed and the stamp hasn't shifted.

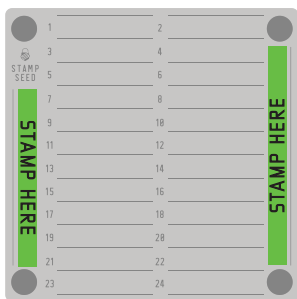

4.

Repeat

Move to the next character position, ensuring the plate remains aligned. Continue until all words are stamped.

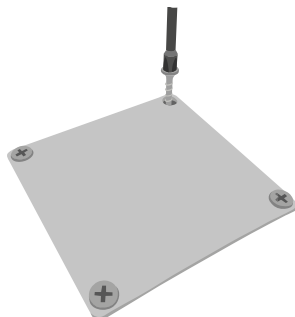

5.

Optional Info

To add extra info (e.g., corrections, PINs, anti-phishing words, wallet name), insert the plate sideways and use the side lines as guides.

6.

Secure the Plate

Use the corner holes to mount the seed plate to a surface with screws or nails for added security.
